# Extraordinary Executive Control (EEC)

Daily Bayesian Warning Report | 2 October 2026 | Monitoring horizon through 5 November 2026

| E1 | 103.0 | +3.0 | WITHHELD |
|---|---|---|---|
| Current state | Warning index | 24-hour change | P(E2 or E3) |

**Executive assessment.** The system remains at **E1 - exceptional intervention**. The index rises from 100.0 to **103.0** because a newly public, election-specific presidential statement preserved the option of invoking the Insurrection Act or declaring an emergency around the midterms. That intent signal is partly offset by fresh judicial/state constraints and by continuing negative execution indicators: DHS/ICE says it has no plan for broad polling-place deployments, the Joint Chiefs chairman has said there are no plans for troops or federalized Guard at polling places, and no new White House emergency or Insurrection Act action was identified.

**Important:** 103.0 is a normalized evidence index, **not a probability**. The model still lacks calibrated priors and conditional-probability tables sufficient to publish a defensible P(E2 or E3).

## What changed since 1 October

### Intent / contingency

**New positive warning signal.** In an interview conducted 28 September and published 1 October, President Trump declined to rule out an election-period emergency and explicitly referenced the Insurrection Act, saying, in part, "I don't rule anything out or in" and "I could use it." Because the observation became public after the prior report, it enters today's information state. It is deduplicated against earlier generic Insurrection Act rhetoric; only the incremental election-specific content is scored.

### Execution / federal law enforcement

**Low-weight positive signal.** DOJ announced on 1 October that a Wisconsin defendant had been charged with unlawful noncitizen voting in the 2024 election. This shows active election-focused federal enforcement, but it remains ordinary criminal process rather than federal assumption of election administration.

### Judicial / state constraint

**Countervailing signal.** A federal judge dismissed DOJ's renewed attempt to obtain Georgia's unredacted statewide voter data; reporting notes similar federal losses elsewhere. Separately, a Florida federal judge dismissed a noncitizen-voting prosecution after finding the federal statute unconstitutional in that case. Neither ruling is a nationwide merits resolution, but both strengthen the observed constraint path.

### Operational negative indicators

**No execution escalation identified.** AP reports that DHS and ICE say there are no plans for broad officer deployments to polling places, while leaving open targeted law-enforcement responses to specific threats or warrants. The previously reported military position also remains unchanged: no plans for federal troops or federalized Guard at polling sites and no plan to seize election materials.

## Daily Bayesian evidence update

| Node / path | Observation | Class | Index effect |
|---|---|---|---|
| C4/C5/C6 - emergency / Insurrection Act intent | Election-period use explicitly left open in newly public interview | Intent / contingency | +5 |
| E3 - federal election enforcement | New DOJ noncitizen-voting charge announced | Execution, ordinary legal channel | +1 |

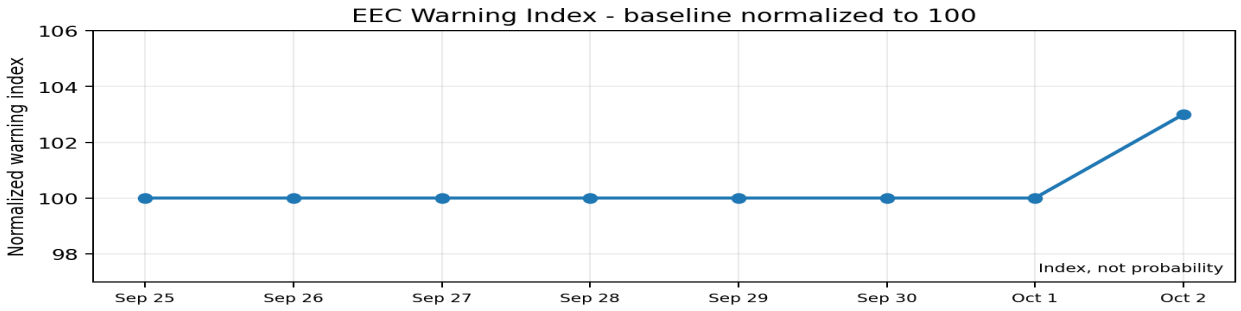

| Node / path | Observation | Class | Index effect |
|---|---|---|---|
| F1/F3 - judicial and state constraint | Georgia voter-data demand dismissed; Florida federal voting prosecution dismissed | Constraint | -2 |
| D5/D6/E4 - force or physical election intervention | No new staging/deployment; DHS/ICE says no broad polling-site plan; Caine position remains | Negative execution evidence | -1 |
| **Net daily update** | Conservative ordinal evidence update pending calibrated CPTs | Model assumption | **+3** |

The +3 change is a temporary evidence-index update, not a calibrated likelihood ratio. It is intentionally conservative: the new presidential statement is directly on the relevant intent path, but there is still no corresponding operational preparation or execution evidence.

## Current node posture

| Category | Status on 2 Oct | Assessment |
|---|---|---|
| Capability | Executive, DHS/DOJ, DOD cyber/intelligence and federal database capabilities remain available. | Elevated but mostly baseline |
| Intent | President now publicly leaves open an election-period emergency / Insurrection Act option. | Incrementally higher |
| Preparation | No new public election-related troop staging, Guard federalization, or polling-site operational order found. | No material change |
| Execution | Election-focused DOJ enforcement continues; no physical election intervention or civil-authority displacement found. | E1 only |
| Constraints | Courts continue to block or narrow federal election interventions; state resistance remains active; military leadership has stated elections are fundamentally state/local responsibilities. | Active / meaningful |

## Trend

**Series:** Sep 25 100.0 -> Sep 26 100.0 -> Sep 27 100.0 -> Sep 28 100.0 -> Sep 29 100.0 -> Sep 30 100.0 -> Oct 1 100.0 -> **Oct 2 103.0**.

## E0-E3 state assessment

| State | Operational shorthand used in this series | Observed? |
|---|---|---|
| E0 | Routine governance and ordinary election administration | Background state |
| E1 | Exceptional federal intervention, pressure, enforcement, or capability without displacement of normal civil election authority | **YES - current** |
| E2 | Coercive operational intervention materially affecting election administration or civil authority | No |
| E3 | Martial-law-equivalent or extraordinary executive displacement of civilian/election authority | No |

## Prediction-market sensor

Polymarket/Polydata shows the year-end Insurrection Act contract near **14-15%** on 2 October, while Polymarket shows the separate "nationalize elections" contract near **8%**. These are not used as independent Bayesian priors because their event definitions, time horizons, liquidity, and information inputs do not match the EEC endpoint and overlap heavily with news already represented in the evidence network.

## Near-term watch indicators

• **Escalatory:** a presidential proclamation or memorandum invoking emergency authority for election purposes; formal Insurrection Act invocation; DOJ/OLC or DOD legal guidance tied to election-period domestic force; prepare-to-deploy orders linked to election sites; federalized Guard movement; ICE/FBI operational plans for polling/counting locations; attempts to seize or control ballots, voting systems, certification, or state election personnel.

• **Constraining:** new court injunctions or Supreme Court stays limiting election-related executive actions; bipartisan congressional restrictions or funding limits; state refusals upheld by courts; explicit military or law-enforcement directives reaffirming noninterference at election sites.

• **Model discipline:** repeated articles about the same underlying event will not be counted as separate evidence. Capability, intent, preparation, execution, and constraints remain separate nodes to avoid treating rhetoric as operational action.

## Observed facts vs. model assumptions

**Observed facts** are the dated public statements, court rulings, prosecutions, agency positions, presidential actions, and market prices summarized above. **Model assumptions** are the E0-E3 mapping, evidence-node classification, deduplication decisions, and the +3 normalized index adjustment. The model does not infer that an extraordinary-control event will occur; it records how new evidence changes the warning posture relative to the 25 September baseline.
