Extraordinary Executive Control (EEC)

Daily Bayesian Warning Report - 4 October 2026

102.2	E1	CLOSED	WITHHELD
Preparation-state index P_t (normalized index, not probability)	Executed-state classification E_t	E1 -> E2 execution gate	P(E2 or E3) pending empirical calibration

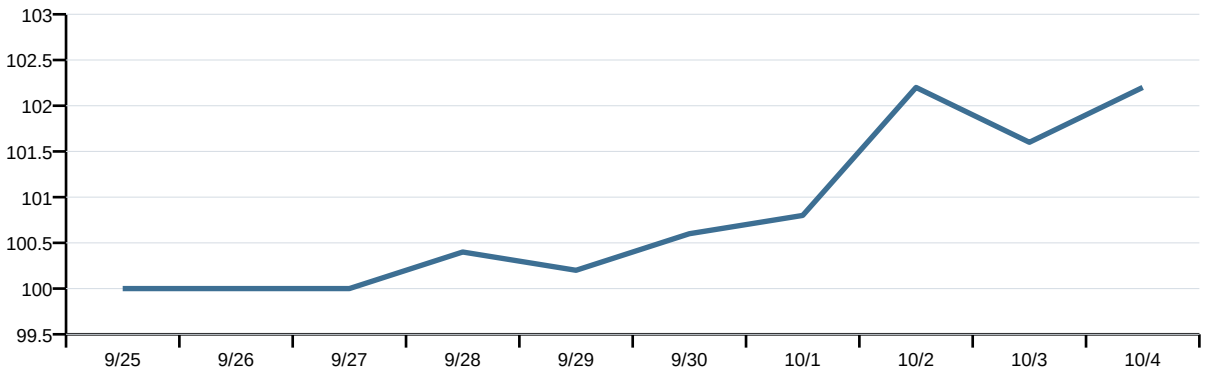

Bottom line: Preparation evidence edges upward after back-casting a new Georgia federal-intervention request and adding a modest operational signal from continued federally commanded Guard/federal-agent activity near D.C. schools. No direct execution indicator was identified. The execution gate remains closed, so the model stays at E1.

1. Daily assessment

The reconciled preparation-state index is **102.2**, up **0.6** from the revised 3 October value of 101.6 and 2.2 points above the 25 September baseline of 100.0. The previously published 3 October value was 101.1; today's review back-casts the Georgia State Election Board request into its actual first-observed period rather than treating it as an artificial 4 October spike. Index arithmetic is a structured evidence score, not a calibrated event probability.

The executed state remains **E1**: unusual federal preparation/intervention exists while normal civilian institutions remain operative. The E1 -> E2 gate remains **CLOSED**. I found no public evidence today of an Insurrection Act invocation, an election-specific national-emergency order activating extraordinary domestic authority, federalized Guard or active-duty forces executing an election-control mission, or an actual transfer/displacement of state or local civilian election authority. The White House Presidential Actions index reviewed today lists its latest action as the 2 October National Manufacturing Day proclamation, followed by unrelated 29 September actions.

2. Dynamic trend

Preparation-state trend (reconciled/back-cast series). Executed state E_t remains E1 on every date shown; the E1 -> E2 gate remained closed.

Date	P_t	E_t	Gate	Comment
9/25	100.0	E1	Closed	Baseline
9/26	100.0	E1	Closed	No material delta
9/27	100.0	E1	Closed	No material delta
9/28	100.4	E1	Closed	Georgia SEB resolution back-cast
9/29	100.2	E1	Closed	Q signal persists
9/30	100.6	E1	Closed	Formal Georgia request to DOJ/DHS
10/1	100.8	E1	Closed	Public confirmation / federal-request persistence
10/2	102.2	E1	Closed	Election-emergency rhetoric + persistent Q
10/3	101.6	E1	Closed	Rhetoric decay / constraints
10/4	102.2	E1	Closed	D.C. O/Q increment + cluster interaction

3. New and persistent precursor observations

ID / family	Observation / pathway	Reliability / strength	Timing / decay	Correlation / confirmation / contradiction
GA-SEB-0930 **Q**	Georgia State Election Board sent DOJ and DHS letters asking them to declare Georgia's voting system non-compliant and compel an immediate software update/new-system timeline. Pathway: federal-state election-administration escalation. This is a **state request for federal intervention**, not evidence that federal agencies have acted.	**High** source reliability. **Moderate** relevance/strength.	Resolution 28 Sep; letters 30 Sep; public reporting 1-2 Oct. Medium/long persistence: ~21 days or until acted on/superseded.	CID: GEO-SEB-FED-0930. 3 confirming reports/sources. Contradiction: Georgia Secretary of State resists late changes; no federal response/action identified.
DC-SCHOOLS-1003 **O / Q**	National Guard personnel and federal agents have appeared near D.C. public schools during drop-off as part of the continuing federal crime operation, despite city requests to avoid schools, recreation areas and voting sites. Pathway: domestic military support to law enforcement / federal-local friction. Increment is location/visibility, not a new mission authorization.	**High** reliability for reported activity. **Low-moderate** incremental strength.	Reported 3 Oct; underlying mission dates to Aug. Short physical-staging/patrol decay: ~7 days unless repeated.	CID: DC-JTF-SCHOOLS-1003. 2-source confirmation of underlying mission/activity. Contradiction: Marshals describe crime-focused warrant/patrol mission; no reported election-control task or civil-authority displacement.
TIME-IA-0928 **J**	President declined to rule out an election-period emergency or Insurrection Act use and said he could use the Act. Pathway: official justification/intent environment. This remains rhetoric/contingency language, not an order.	**High** reliability (direct interview). **Moderate** precursor strength.	Interview 28 Sep; published 1 Oct. Short decay: 3-5 days absent repetition or implementing action.	CID: TIME-IA-0928. Multiple reports of same interview are deduplicated. Contradiction: military/DHS no-plans statements; no implementing order.
DOD-POLLS-N **N**	Gen. Dan Caine stated the Joint Force has no plans to send federal military/federalized Guard to polling places or seize ballots, machines, or other election material. Pathway: military institutional constraint / explicit negative evidence.	**High** reliability. **Moderate-strong** negative evidence for election-control execution.	31 Aug; persistent unless superseded. Medium decay: ~14 days, renewed by later consistent Pentagon statements.	CID: DOD-ELECTION-GUARDRAIL. Correlated press reports counted as one event. Contradiction: presidential contingency rhetoric, but no order.
WH-ACTIONS-1004 **N**	Daily check of White House Presidential Actions found no new qualifying Insurrection Act invocation or election-related emergency order. Pathway: absence of formal legal execution.	**High** source reliability. **Weak** negative evidence because absence is not proof of no internal preparation.	Checked 4 Oct. Daily persistence/decay: 1 day.	CID: WH-ORDER-CHECK-DAILY. 1 authoritative source. No contradictory formal order located.
FOREIGN-THREAT-1004 **J/N - context**	Reporting says U.S. intelligence is monitoring foreign influence/disinformation efforts but officials do not see direct capability to alter voting machines or vote counts; state officials also describe reduced federal election-security support. Pathway: possible future justification environment, but mixed/ambiguous.	**Medium-high** reliability. **Weak / unscored** for EEC.	Published 4 Oct. Short-medium context persistence.	CID: FOREIGN-INFLUENCE-1004. 1 major report with multiple official/state sources. Negative component: no direct machine/count threat reported.

4. Index movement and gate logic

Today's incremental movement versus reconciled 3 October: +0.4 from the D.C. operational/federal-local-interface observation; +0.3 from short-window clustering across independent J, Q and O precursor families; -0.1 from decay of the

election-emergency/Insurrection Act rhetoric signal. Net = **+0.6**. The Georgia event is not counted as a new 4 October increment; it is back-cast into 28 September-3 October because the resolution and letters predate today's run.

Execution gate: CLOSED. The gate requires a direct execution indicator: a formal order activating qualifying extraordinary authority; forces actually executing the corresponding domestic law-enforcement/election-control mission; or actual transfer/displacement of normal civilian command authority. The D.C. operation involves federally commanded Guard support to law enforcement, but in this model it remains an E1-type near-miss/strong-preparation analogue because the newly reported school-area activity does not demonstrate election-control execution or displacement of civil government.

Strongest positive contributors	Strongest negative/constraint contributors
1. Q: Georgia board formal request for DOJ/DHS intervention in voting-system changes. 2. J: Presidential contingency rhetoric about emergency/Insurrection Act use. 3. O/Q: Continued visible federal-command Guard/federal-agent operations near D.C. civic institutions.	1. N: Joint Chiefs statement - no plan for troops/federalized Guard at polling places or seizure of election material. 2. N: No new qualifying presidential order located in today's White House actions check. 3. N/Q: Georgia Secretary of State resistance; no federal action on the board request identified.

5. Prediction-market weak-signal layer

Prediction markets are monitored separately and are **not fed into the core P_t index**. They are correlated with the same public reporting used elsewhere and have contract definitions/horizons that do not match the EEC state definitions. As of today, Polymarket shows approximately **14%** for Insurrection Act invocation by 31 December 2026, **9%** for "nationalize elections," and approximately **23%** for the December 31 outcome in its election-interference national-emergency market. These values are market prices, not model probabilities.

6. Calibration sanity check

The current pattern continues to behave more like the intended **near-miss / high-preparation controls** than the historical escalation cases. Under the back-test logic, Little Rock 1957, Detroit 1967 and Los Angeles 1992 should cross an execution gate because military/federal authority was actually activated and used. Ferguson 2014, Washington 2020 and January 6, 2021 are used to test false-positive resistance: serious unrest, Guard activity, rhetoric or unusual preparation should not automatically become E2 without the model's required execution evidence. This small historical set is a design sanity check only and is **not statistical validation**.

7. Monitoring horizon

No enacted change to the new Congress's convening date was identified in today's check. The Twentieth Amendment provides that Congress assembles at noon on **3 January** unless a different day is appointed by law. The current monitoring horizon therefore remains **5 January 2027**, two days after the constitutional default convening date.

8. Model assumptions and analytic cautions

• P_t is a normalized evidence/risk index anchored at 100 on 25 September 2026. It is not a calibrated probability and has no direct frequency interpretation.

• Observations are deduplicated at the underlying-event level. Multiple media stories about one statement/order/movement share a correlation ID and do not multiply evidence.

• Rhetoric and physical staging decay faster than legal/organizational preparation. Formal requests, directives and command changes persist until superseded or their operational relevance expires.

• Temporal clusters of independent moderate-or-strong families can add interaction weight, but clustering cannot open the execution gate without direct execution evidence.

• State-controlled Guard activity does not count as federal E1/E2 escalation by itself. Federalization, direct federal command, or federal active-duty missions are treated separately.

• Negative evidence and institutional constraints are explicit model inputs; the index can move downward as signals decay or constraints strengthen.

Assessment status: E1 / gate closed. Next-run priority indicators: federal response to the Georgia request; any new White House/DOJ/DHS/DoD directive; change in Guard command status or mission scope; polling-place/vote-custody deployments; new judicial or congressional constraints; and any formal emergency or Insurrection Act action.
