Extraordinary Executive Control (EEC)

Daily Bayesian Warning Report - 5 October 2026

101.6	E1	CLOSED	WITHHELD
Preparation-state index P_t (normalized index, not probability)	Executed-state classification E_t	E1 -> E2 execution gate	P(E2 or E3) pending empirical calibration

Bottom line: No new qualifying execution indicator or materially new precursor family was identified in the morning review. Existing Q, J and O signals persist but are decaying, while military, DHS and judicial constraints remain active. The preparation index therefore eases to **101.6**; the executed state remains **E1** and the E1 -> E2 gate remains **closed**.

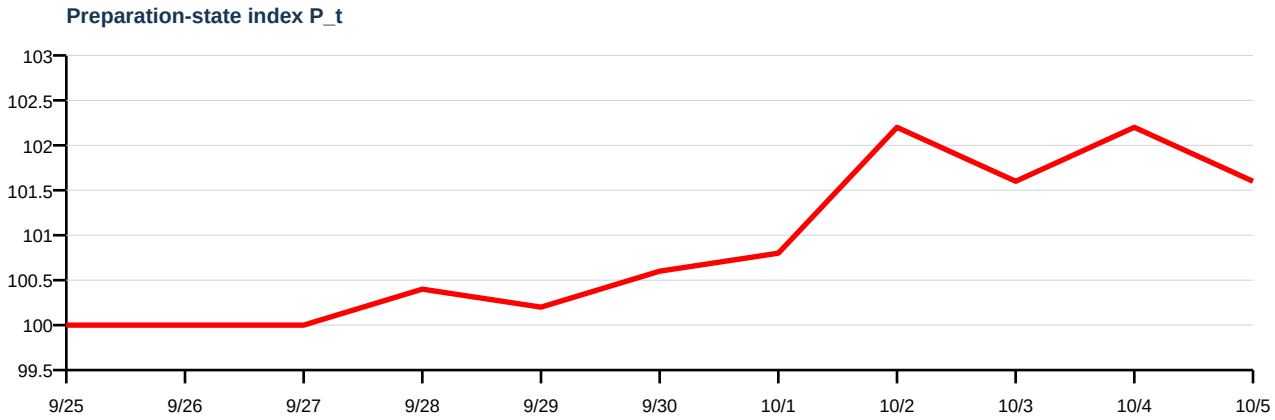

1. Daily assessment

The preparation-state index P_t is **101.6**, down **0.6** from 4 October's 102.2 and 1.6 points above the 25 September baseline of 100.0. This is a normalized evidence/risk index, not a probability. The change is driven primarily by decay of the short-lived rhetoric and physical-staging components; no new independent moderate-or-strong L, A, O, Q or J precursor was identified that would offset that decay.

The executed state remains **E1**: unusual federal preparation/intervention exists while normal civilian institutions remain operative. The **E1 -> E2 execution gate remains CLOSED**. Today's public-source review found no qualifying Insurrection Act invocation, election-specific national-emergency order activating extraordinary domestic authority, federalized Guard or active-duty force executing an election-control mission, or actual transfer/displacement of state or local civilian election command. The White House Presidential Actions index continues to list 2 October as its latest action, followed by unrelated 29 September actions.

California begins its vote-by-mail period today. The model treats the start of live ballot operations as a reason to increase surveillance sensitivity, not as a positive precursor. Calendar proximity alone cannot raise P_t or open the execution gate.

2. Dynamic trend

Preparation-state trend (reconciled/back-cast series). Executed state E_t remains E1 on every date shown; the E1 -> E2 gate remained closed.

Date	P_t	E_t	Gate	Comment
9/25	100.0	E1	Closed	Baseline
9/26	100.0	E1	Closed	No material delta
9/27	100.0	E1	Closed	No material delta
9/28	100.4	E1	Closed	Georgia SEB resolution back-cast
9/29	100.2	E1	Closed	Q signal persists
9/30	100.6	E1	Closed	Formal Georgia request to DOJ/DHS
10/1	100.8	E1	Closed	Public confirmation / Q persistence
10/2	102.2	E1	Closed	Election-emergency rhetoric + persistent Q
10/3	101.6	E1	Closed	Rhetoric decay / constraints
10/4	102.2	E1	Closed	D.C. O/Q increment + cluster interaction
10/5	101.6	E1	Closed	Decay; no new qualifying precursor or execution

3. New and persistent precursor observations

ID / family	Observation / pathway	Reliability / strength	Timing / decay	Correlation / confirmation / contradiction
WH-ACTIONS-1005 N	Daily review of the White House Presidential Actions index found no new qualifying Insurrection Act invocation, election-related national-emergency declaration, or election-control order. Pathway: absence of formal legal execution.	High source reliability. Weak negative evidence because public absence does not exclude internal preparation.	Checked 5 Oct. Daily persistence/decay: 1 day.	CID: WH-ORDER-CHECK-DAILY. 1 authoritative source. No contradictory formal order located.
GA-SEB-0930 Q	Georgia State Election Board letters ask DOJ and DHS to declare the state voting system non-compliant and compel software/system changes. Pathway: federal-state election-administration escalation. This remains a state request for federal intervention, not evidence that federal agencies acted.	High source reliability. Moderate relevance/strength.	Resolution 28 Sep; letters 30 Sep; public reporting 2 Oct. Medium/long persistence: about 21 days or until acted on/superseded.	CID: GEO-SEB-FED-0930. Multiple confirming reports. Contradiction: state election officials resist late changes; no federal implementation identified in today's review.
TIME-IA-0928 J	President declined to rule out election-period use of emergency authority / the Insurrection Act and separately left open possible ICE activity at polling locations. Pathway: official justification / intent environment. This is rhetoric and contingency language, not an order.	High reliability for attributed direct interview. Moderate precursor strength, declining with age.	Interview 28 Sep; published 1-2 Oct. Short decay: 3-5 days absent repetition or implementing action.	CID: TIME-IA-0928. Multiple reports of the same interview deduplicated. Contradiction: military and DHS no-plans statements; no implementing order.
DC-SCHOOLS-1003 O/Q	National Guard personnel and federal agents have appeared near D.C. schools during drop-off as part of the continuing federal crime operation. Pathway: domestic military support to law enforcement / federal-local friction. No election-control task has been reported.	High reliability for reported activity. Low-moderate incremental EEC relevance.	Reported 3 Oct; underlying mission dates to Aug. Short physical-staging decay: about 7 days unless repeated.	CID: DC-JTF-SCHOOLS-1003. Underlying mission independently confirmed by D.C. Guard. Contradiction: reported mission remains crime-focused; no civilian-authority displacement.
DOD-POLLS-N N	Gen. Dan Caine stated the Joint Force has no plans to send federal military/federalized Guard to polling places or seize ballots, voting machines, or other election material. Pathway: military institutional constraint / explicit negative evidence.	High reliability. Moderate-strong negative evidence for election-control execution.	31 Aug; persistent unless superseded. Medium decay, renewed by later consistent public statements.	CID: DOD-ELECTION-GUARDRAIL. AP reporting plus Senate release refer to the same letter and are counted as one event. Contradiction: presidential contingency rhetoric, but no order.

ID / family	Observation / pathway	Reliability / strength	Timing / decay	Correlation / confirmation / contradiction
DHS-ICE-POLLS-1002 N	DHS/ICE officials say there are no plans for broad deployment of ICE officers to monitor polling places, while not categorically excluding targeted actions tied to particular threats or warrants. Pathway: executive-branch operational constraint.	High reliability via AP reporting citing DHS/ICE officials. Moderate negative evidence, bounded rather than absolute.	First observed 2 Oct. Medium decay: about 10-14 days absent contrary tasking.	CID: DHS-ICE-POLLS-1002. Multiple official statements represented as one event. Contradiction: President did not rule out future use.
GA-DOJ-DATA-0930 N/Q	A federal judge dismissed DOJ's suit seeking Georgia's unredacted statewide voter file; Georgia says state privacy law bars disclosure of sensitive fields. Pathway: judicial/state constraint on a federal election-data demand.	High reliability from state official release; moderate constraint strength. Case-specific, not a general bar on federal election enforcement.	30 Sep. Medium persistence: about 14 days or until appeal/refiling materially changes posture.	CID: DOJ-GA-VOTERDATA-0930. Official state source plus local/national reporting. Contradiction: DOJ retains other lawful litigation/enforcement pathways.
CA-BALLOTS-1005 Context	California counties begin mailing general-election ballots by 5 Oct, marking transition into active vote-by-mail operations in a major jurisdiction. This increases monitoring sensitivity but is not itself an EEC precursor.	High reliability from California Secretary of State. Unscored context.	5 Oct operational date; persists through election period.	CID: ELECTION-PHASE-CA-1005. No contradiction; calendar event only.

4. Index movement and gate logic

Today's incremental movement versus 4 October: -0.3 from decay of the election-emergency / Insurrection Act rhetoric signal; -0.2 from decay of the D.C. school-area physical-staging component absent a new mission authorization; -0.1 from fading short-window J/Q/O clustering. The Georgia federal-intervention request remains a persistent Q-family contributor but adds no new daily increment because no federal action on the request was identified. Net daily change = **-0.6**. These increments are model assumptions used to structure the index; they are not calibrated likelihood ratios.

Execution gate: CLOSED. The gate requires at least one direct execution indicator: a formal order activating qualifying extraordinary authority; forces actually executing the corresponding domestic law-enforcement/election-control mission; or actual transfer/displacement of normal civilian command authority. Accumulated rhetoric, litigation, cyber-support activity, ordinary federal enforcement, or Guard presence cannot substitute for that condition.

Strongest positive contributors	Strongest negative / constraint contributors
1. **Q:** Georgia board formal request for DOJ/DHS intervention in voting-system changes. 2. **J:** Residual presidential contingency rhetoric about emergency / Insurrection Act use; now decaying. 3. **O/Q:** Continuing federally commanded Guard/federal-agent operations in D.C.; mission remains crime-focused, not election-control.	1. **N:** Joint Chiefs statement: no plan for troops/federalized Guard at polling places or seizure of election material. 2. **N:** DHS/ICE no broad polling-place deployment plan. 3. **N/Q:** Federal court rejection of DOJ's unredacted Georgia voter-data demand in that case; state/local election administration remains operative. 4. **N:** No qualifying presidential order located in today's official actions check.

5. Prediction-market weak-signal layer

Prediction markets remain outside the core P_t computation because they are correlated with the same public reporting and use different definitions and horizons. Current Polymarket pages show roughly **15-16%** for Insurrection Act invocation by 31 December, approximately **11%** for "nationalize elections," and about **23%** for a qualifying election-interference national emergency by year-end. The nationalization contract is modestly higher than yesterday's observed level, but this is treated only as a weak external expectation signal and does not move

the core index.

6. Calibration sanity check

The detector continues to behave more like the intended near-miss / high-preparation controls than the historical escalation cases. Little Rock 1957, Detroit 1967 and Los Angeles 1992 should cross an execution gate because qualifying military/federal authority was actually activated and used. Ferguson 2014, Washington 2020 and January 6, 2021 are used to test false-positive resistance: serious unrest, Guard activity, rhetoric or unusual preparation should not automatically become E2 without direct execution evidence. This small historical set is a design sanity check only and is not statistical validation.

7. Monitoring horizon

No enacted change to the new Congress's convening date was identified in today's review. The Twentieth Amendment provides that Congress assembles at noon on 3 January unless a different day is appointed by law. The monitoring horizon therefore remains **5 January 2027**, two days after the constitutional default convening date.

8. Model assumptions and analytic cautions

• P_t is a normalized evidence/risk index anchored at 100 on 25 September 2026. It is not a calibrated probability and has no direct frequency interpretation.

• Observations are deduplicated at the underlying-event level. Multiple stories about one statement, order or movement share a correlation ID and do not multiply evidence.

• Rhetoric and physical staging decay faster than legal or organizational preparation. Formal requests, directives and command changes persist until superseded or their operational relevance expires.

• Temporal clusters of independent moderate-or-strong families can add interaction weight, but clustering cannot open the execution gate without direct execution evidence.

• State-controlled National Guard activity does not count as federal E1/E2 escalation by itself. Federalization, direct federal command or active-duty federal missions are treated separately.

• Negative evidence and institutional constraints are explicit model inputs; the index can move downward as signals decay or constraints strengthen.

• The start of live ballot operations increases monitoring sensitivity but is not scored as a precursor without an associated federal action or extraordinary-authority pathway.
