Extraordinary Executive Control (EEC)
Daily Bayesian Warning Report

6 October 2026 | As-of 08:13 ET | Two-stage dynamic architecture: Observable Precursors -> P_t -> E_t

Preparation-state index P_t	**101.6**
Prior day	101.6
Baseline (25 Sep)	100.0
Executed state E_t	**E1**
E1 -> E2 execution gate	**CLOSED**
P(E2 or E3)	**Withheld - model not empirically calibrated**

Bottom line. The model remains in E1. The preparation-state index is unchanged at 101.6. New post-report evidence consists mainly of two J/A-family signals - presidential criticism of a Maricopa County ballot-mailing error and a DOJ announcement of 16 election-crime cases - but both remain ordinary-rhetoric / ordinary-law-enforcement observations rather than direct preparation for extraordinary authority. Their modest positive contribution is offset by continued decay of older rhetoric and staging signals, current intelligence evidence that direct foreign manipulation of vote counts is unlikely, the military leadership no-deployment assurance, and the absence of a new qualifying presidential order. No direct execution indicator was identified, so the E1 -> E2 gate remains closed.

1. Daily change assessment

No material movement in P_t today. The model records approximately +0.25 index points for the October 5 Maricopa rhetoric signal and +0.20 for the October 5 DOJ election-crime enforcement announcement. These are offset by about -0.25 from further decay of the October 1 election-emergency / Insurrection Act rhetoric, -0.10 from decay of the D.C. physical-staging signal, and -0.10 from continuing institutional/IC negative evidence. These point values are model assumptions used to keep the normalized index internally consistent; they are not calibrated likelihood ratios or probabilities.

2. New and persistent observations

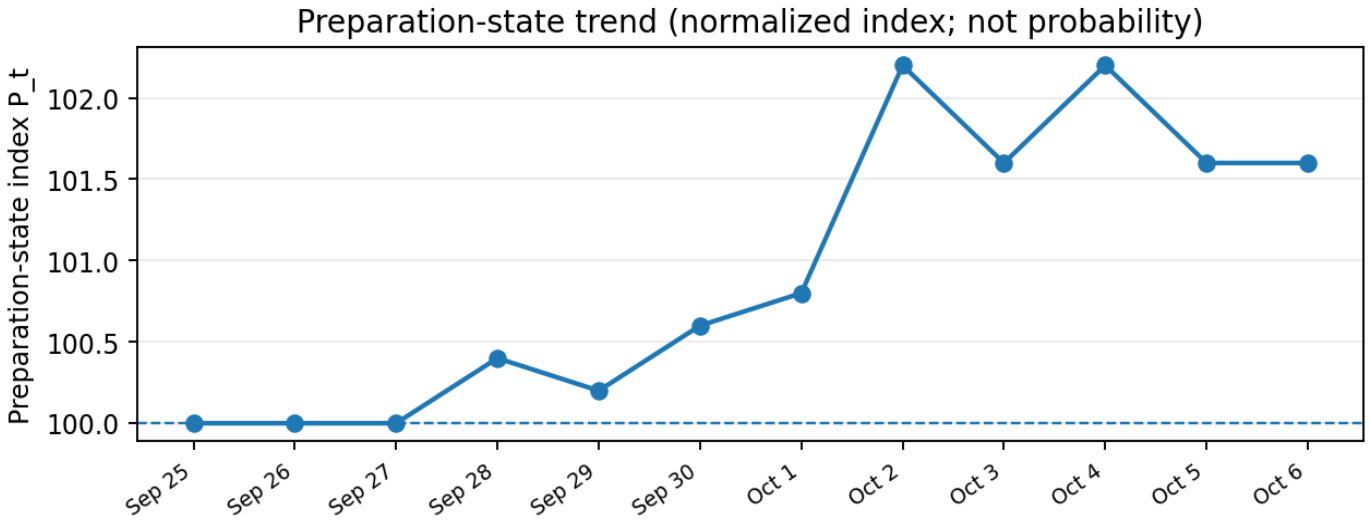

ID	Fam.	Observation / pathway	Rel.	Strength	First seen	Decay	Corr.	Conf.	Contradictory / negative evidence
OBS-1006-01	J	President criticized Maricopa County after 3,126 ballots were mailed six days early; relevant to election-integrity justification rhetoric, not an execution order.	High	Low	5 Oct	~2 d	J-ARIZ-1005	1	County/vendor say mailing was accidental; ballots were valid and went to correct voters. [S1]
OBS-1006-02	A/J	DOJ announced charges involving 16 noncitizens for alleged election crimes. Relevant to federal election-enforcement capacity and justification environment; activity remains ordinary criminal process.	High	Low-Mod.	5 Oct	~7-10 d	DOJ-ELEX-1005	1	Most alleged conduct concerns 2022/2024 elections; charges are allegations; no transfer of election administration. [S2]
OBS-1006-03	N	Recent IC briefings/reports indicate foreign influence activity but little likelihood of direct interference with vote counts; Warner/Himes requested timely public and congressional threat reporting. This constrains a foreign-interference factual predicate.	Med-High	Moderate (-)	2-4 Oct	~14 d	IC-THREAT-1002	2	White House July releases emphasize vulnerabilities and foreign capability, but current direct vote-count interference has not been publicly established. [S3][S4]
OBS-1006-04	N	Chairman of the Joint Chiefs Gen. Dan Caine stated no plans to send federal troops/federalized Guard to polling places or seize election materials. Directly relevant to military-election pathway.	High	Strong (-)	31 Aug	~30 d	MIL-ELEX-0831	2	Presidential rhetoric has left some emergency options open; the military assurance is current-plan evidence, not an irrevocable bar. [S5]
OBS-1006-05	N	White House Presidential Actions index through 5 Oct shows no Insurrection Act invocation or election-related emergency order. Latest listed action is unrelated economic emergency tax relief on diesel fuel.	High	Weak (-)	6 Oct check	~1 d	WH-ACT-1006	1	Absence of a public order does not exclude nonpublic planning. [S6]

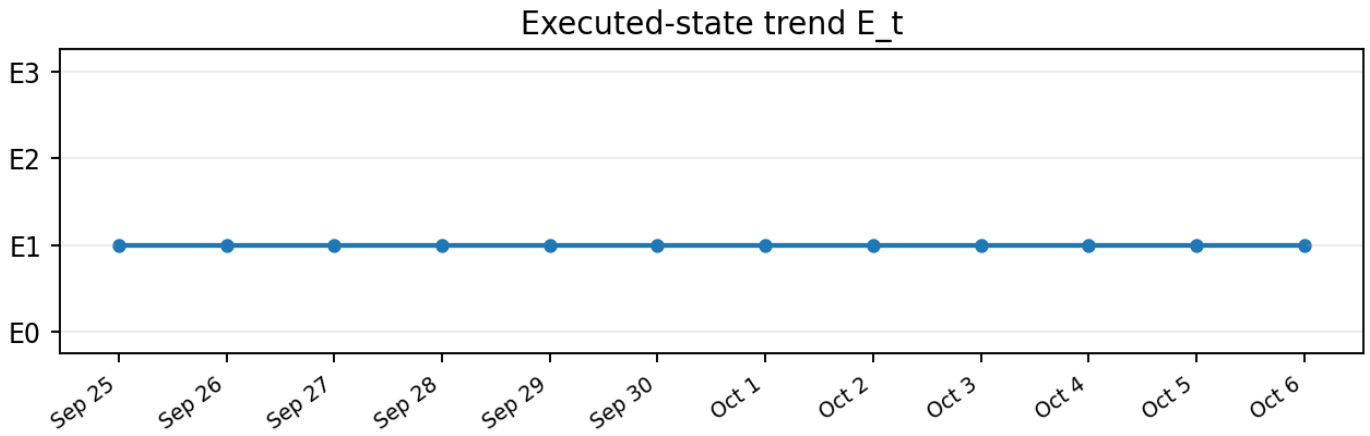

3. Execution gate analysis

Gate status: CLOSED. Under the revised architecture, accumulated precursor evidence cannot produce E2 without at least one direct execution indicator. Today's review identified none of the required conditions: no actual invocation/order activating extraordinary domestic authority for the election context; no federalized Guard or active-duty force executing a corresponding election-control or domestic law-enforcement mission; and no actual transfer/displacement of normal state or local civilian election command. State-controlled National Guard activity, if any, is not scored as federal escalation unless federalization or a federal command relationship is established.

Strongest positive contributors	Strongest negative / constraining contributors
1. Q-family Georgia federal-intervention request (persistent, moderate). 2. Residual J-family Oct. 1 emergency / Insurrection Act rhetoric (decaying). 3. New J-family Maricopa rhetoric (low, short-lived). 4. New A/J DOJ election-crime enforcement activity (low-moderate, ordinary process).	1. Military leadership assurance: no plan for troops/federalized Guard at polls or seizure of election materials. 2. IC/public congressional reporting: little current evidence of direct foreign vote-count interference. 3. DHS/ICE broad polling-place deployment denial remains unsuperseded. 4. No qualifying public presidential execution order through Oct. 5.

4. Trend

Trend note: E_t remains E1 throughout the displayed series and the E1 -> E2 gate remains closed. The P_t series is a normalized evidence index. It should not be interpreted as a percentage or probability.

Date	P_t	E_t	Gate
Sep 25	100.0	E1	Closed
Sep 26	100.0	E1	Closed
Sep 27	100.0	E1	Closed
Sep 28	100.4	E1	Closed
Sep 29	100.2	E1	Closed
Sep 30	100.6	E1	Closed
Oct 1	100.8	E1	Closed
Oct 2	102.2	E1	Closed
Oct 3	101.6	E1	Closed
Oct 4	102.2	E1	Closed
Oct 5	101.6	E1	Closed
Oct 6	101.6	E1	Closed

5. Prediction-market weak-signal layer

Prediction markets are monitored separately and are not included as independent evidence in P_t because they can be thin, definition-sensitive, and correlated with the same public reporting used elsewhere in the model. As of this morning, Polymarket displayed approximately 12-13% for Insurrection Act invocation by Dec. 31, about 10% for its separate "nationalize elections" contract, and about 28% for a qualifying election-interference national emergency by Dec. 31. The contracts have different resolution criteria and horizons from the EEC model, so these prices are treated only as weak external-expectation sensors. [S7-S9]

6. Historical back-test sanity check

The detector behavior remains consistent with the intended specificity test. Little Rock 1957, Detroit 1967, and Los Angeles 1992 are used as escalation exemplars in which direct authority/force execution should open the gate. Ferguson 2014, Washington 2020, and January 6, 2021 are used as near-miss controls so that strong rhetoric, disorder, readiness, or federal presence does not mechanically convert to E2 absent direct execution of extraordinary domestic authority. This small historical set is a design sanity check only; it is not statistical validation.

7. Monitoring horizon

No enacted change to the opening date of the 120th Congress was identified in today's review. The Twentieth Amendment sets the congressional term transition at noon on January 3 and allows Congress to appoint a different meeting day by law. The monitoring endpoint therefore remains January 5, 2027 unless a different convening day is enacted. [S10][S11]

8. Model status and caveats

The headline value is intentionally an index rather than a probability. The model is not yet calibrated with enough historical frequency data, priors, and conditional probability tables to justify P(E2 or E3). Observation weights, decay constants, and clustering bonuses remain engineering assumptions. Correlation IDs are used to prevent multiple reports of the same underlying event from multiplying evidence. Direct primary sources are preferred; secondary reporting is used when it provides contemporaneous facts not yet available in primary form.
