Extraordinary Executive Control (EEC)

Daily Bayesian Warning Report - 7 October 2026, 08:06 ET

Preparation state P_t	Executed state E_t	E1 -> E2 gate	Headline probability
101.4	**E1**	**CLOSED**	**WITHHELD**
Prior day: 101.6 Baseline: 100.0	Unusual preparation/intervention; civilian institutions operative	No direct execution indicator identified	Model is not empirically calibrated for P(E2 or E3)

Bottom line. The model shows a small day-over-day decline in preparation evidence. The only material new observation is additional federal election-crime enforcement in Ohio, which is ordinary criminal process and is heavily correlation-discounted against the Department of Justice's October 5 nationwide announcement. No qualifying public order invoking the Insurrection Act, declaring an election-specific national emergency, federalizing Guard for an election-control mission, deploying active-duty forces for election control, or displacing state/local election command was identified. The E1 -> E2 gate therefore remains closed.

1. Daily Model Update

The preparation index moves from **101.6 to 101.4 (-0.2)**. This is a normalized Bayesian evidence/risk index used to track accumulated precursor evidence; it is **not** a literal probability. The small decline reflects decay in short-lived rhetoric signals and the absence of new cross-family escalation, partly offset by a new but low-strength A/J enforcement observation.

Component	Daily effect	Treatment
Oct. 6 Ohio DOJ election-crime arrests	+0.10	Low-strength A/J. Ordinary statutory enforcement; correlation-discounted with Oct. 5 national DOJ cases.
Maricopa / fraud-justification rhetoric decay	-0.15	Short-decay J-family signal; no new operational or legal follow-through identified.
Oct. 1 emergency / Insurrection Act rhetoric decay	-0.10	J-family intent/justification only; aging without new L/A/O confirmation.
Fresh gate-negative check	-0.05	Official presidential-action index still contains no qualifying election-control order; military no-polls position remains unreversed.
Net	**-0.20**	**P_t = 101.4**

2. New and Persistent Observations

ID / family	Observation	Reliability / pathway	Strength / time behavior	Correlation / contradiction
OBS-1007-A A/J	DOJ announced Oct. 6 arrests in three Ohio cases alleging illegal voting by noncitizens in prior federal elections.	**High** - DOJ primary source. Ordinary federal criminal enforcement; not control of election administration.	**Low positive**. First observed Oct. 6. Medium-short decay (about 7-14 days) unless broadened or linked to new authority.	CORR: DOJ-ELEC-ENF-2026. One primary source; correlated with Oct. 5 nationwide DOJ cases. No E2 execution content.
OBS-1007-B N	Official White House Presidential Actions index reviewed Oct. 7 lists Oct. 5 diesel-fuel tax relief as latest action; no qualifying public Insurrection Act or election-specific emergency order identified.	**High** - official White House index. Directly relevant to legal/order execution gate.	**Low-moderate negative**. Refreshed daily; one-day persistence because absence must be rechecked.	CORR: EXEC-ORDER-GATE. Contradiction: prior rhetoric leaves future action possible; absence does not exclude nonpublic preparation.

ID / family	Observation	Reliability / pathway	Strength / time behavior	Correlation / contradiction
OBS-PERSIST-C N/Q	Georgia federal court dismissed DOJ suit seeking an unredacted statewide voter-registration list; Georgia Secretary of State says sensitive fields remain protected under state law.	**High** - Georgia Secretary of State summary of federal ruling. Federal/state election-data pathway.	**Moderate negative constraint**. First observed Sep. 30. Long decay (30-60 days) unless reversed or superseded.	CORR: GA-VOTERROLL-2026. At least two public reporting channels. Possible appeal or refile remains contradictory pathway.
OBS-PERSIST-D A/O	JTF-DC remains a standing domestic military-support capability; official overview reported 3,120 Guard personnel as of Sep. 14 supporting local/federal law enforcement.	**High** - D.C. National Guard primary source. Domestic military-support capability, not election control.	**Moderate background capability**. Long persistence while mission remains active; no fresh Oct. 7 escalation identified.	CORR: JTFDC-2025-26. Not scored as federalized-Guard election execution; mission is described as law-enforcement support.
OBS-PERSIST-E N	Defense Department response and Joint Chiefs Chairman Gen. Dan Caine state there are no plans for active-duty or federalized Guard at polling sites or to interfere with ballots/election materials.	**High** - DoD response reported by Senate office; Caine letter corroborated by AP/Reuters. Direct military-election pathway.	**Moderate-high negative**. First observed Aug. 28/Oct. 1 confirmation. Medium persistence unless contradicted by orders or deployments.	CORR: DOD-POLLS-2026. Multiple confirming channels; prior presidential rhetoric is contradictory intent evidence but not execution.

Deduplication note

Current reporting that the federal government is pursuing election-related subpoenas or appeals is not automatically scored as new evidence. Where the underlying filing or appeal predates the current observation window, the event remains attached to its original correlation identifier and contributes only through persistence/decay. Likewise, the Oct. 6 Ohio cases are treated as an extension of the Oct. 5 DOJ enforcement cluster rather than an independent moderate-strength signal.

3. E1 -> E2 Execution Gate

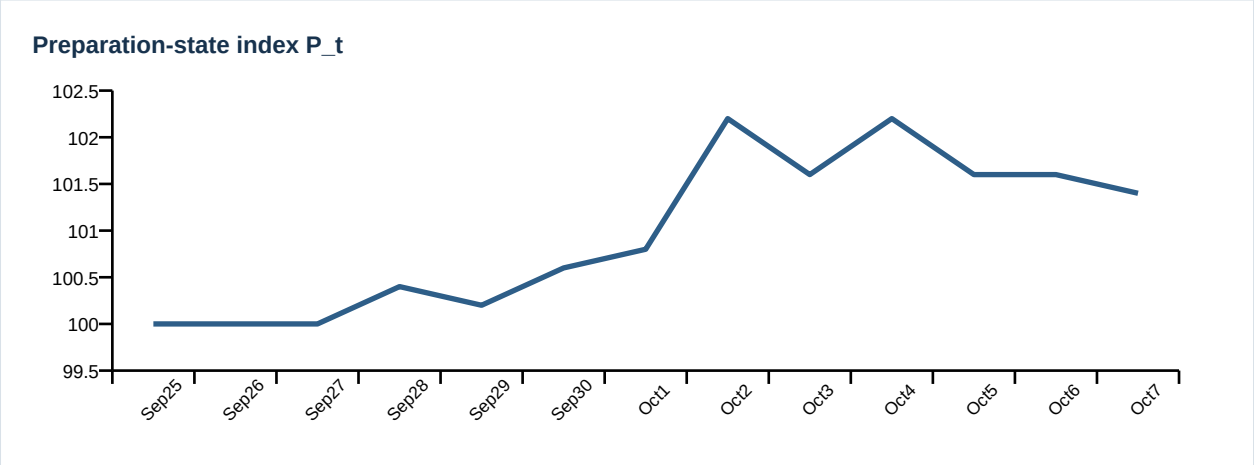

Direct gate criterion	Status	Evidence as of Oct. 7
Formal invocation/order activating extraordinary domestic authority	**CLOSED**	No qualifying public Insurrection Act invocation or election-specific national emergency order identified in the official presidential-action index.
Forces executing extraordinary domestic law-enforcement/election-control mission	**CLOSED**	No active-duty or federalized-Guard election-control mission identified. D.C. Guard activity remains a separate law-enforcement-support capability and is not treated as election execution.
Actual transfer/displacement of normal civilian election command	**CLOSED**	State and local election administration remain operative; federal litigation and criminal cases do not by themselves transfer command authority.

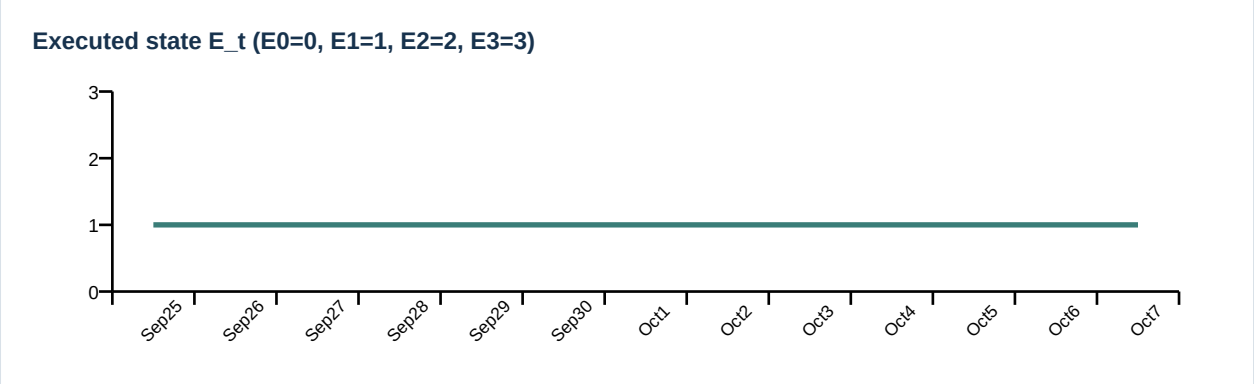

Executed-state conclusion: E1. The model deliberately prevents accumulation of weak J/A/Q signals from producing E2 without a direct execution indicator. This is the false-positive control intended to keep cases analogous to Washington 2020 or Ferguson 2014 from being promoted to E2 merely because unusual capabilities or rhetoric are present.

4. Strongest Contributors

Positive contributors	Negative / constraining contributors
J: Late-September/Oct. 1 statements leaving emergency/Insurrection Act options open; now decaying. **Q:** Persistent federal/state election-administration friction and requests for federal involvement in Georgia. **A/O:** Standing domestic military-support capability in D.C., not election-specific. **A/J:** DOJ election-crime enforcement cluster, including Oct. 6 Ohio cases; low strength for EEC because it uses ordinary criminal process.	**N:** DoD and Joint Chiefs no-plans statements regarding troops/federalized Guard at polling sites and election materials. **N:** No qualifying public presidential action identified in today's official-index review. **N/Q:** Federal court dismissal limiting DOJ access to unredacted Georgia voter data. **N:** Absence of any identified transfer of state/local election command or active-duty/federalized-Guard election-control mission.

5. Trend - Preparation and Executed State

The preparation index has moved within a narrow 100.0-102.2 band since baseline, while the executed-state series has remained E1. The model has not observed a qualifying E2 gate event.

6. Prediction-Market Weak Signals

Contract	Latest indexed level	Model treatment
Insurrection Act invoked by Dec. 31	about **11%**	Weak external expectation sensor only; excluded from core P_t. Contract horizon and resolution rule differ from EEC.
Will Trump nationalize elections?	about **10%**	Weak sensor; thin volume relative to major markets and highly correlated with the same public news used by the model.
Election-interference national emergency by Dec. 31	latest indexed page about **32%**	Weak sensor. Large recent movement is noted but not imported as a probability or independent likelihood ratio.

Because market prices can react to the same underlying reporting already represented in J, A, Q, and N, they are deliberately kept outside the core update to avoid correlated double counting. The current market levels therefore do not change today's E1 classification or the execution gate.

7. Historical Sanity-Check Logic

The detector continues to use Little Rock 1957, Detroit 1967, and Los Angeles 1992 as escalation examples, and Ferguson 2014, Washington 2020, and January 6, 2021 as specificity / near-miss controls. These cases are **not** a statistically sufficient validation set. Their purpose is behavioral: the model should elevate preparation when multiple independent precursor families cluster, but it should not classify E2 without an actual extraordinary-authority execution event. Today's result remains consistent with that design goal.

8. Monitoring Horizon

No enacted change to the next Congress's convening date was identified in today's review. Under Section 2 of the Twentieth Amendment, Congress meets at noon on January 3 unless a different day is appointed by law. The monitoring endpoint therefore remains **January 5, 2027**.

Analytical caution. Source reliability describes the provenance of an observation, not the truth of broader political interpretations. Charges are allegations unless proven in court. Absence of a public order is not proof that no nonpublic planning exists. All score increments and decay choices are model assumptions pending empirical calibration.
