Extraordinary Executive Control (EEC)

Sunday, 11 October 2026 | Evidence cutoff 08:51 EDT | Next institutional horizon: 5 January 2027, conditional on law

PREPARATION P_t	EXECUTED E_t	E1 TO E2 GATE	E2 / E3 PROBABILITY
101.2	**E1**	**CLOSED**	**WITHHELD**
+0.1 day / +1.2 baseline	ordinary civilian organs operative	no qualifying mission/order verified	insufficient calibration

Executive determination. An older but newly incorporated Connecticut report describes possible federal election-record subpoenas in three municipalities. It adds a small Q-family federal/state-interface signal; the records and legal basis are not public. Prior judicial and military-mission limits remain in force in the observed record. After routine rhetoric/physical-proximity decay, the index rises 0.1 to 101.2. No public-source evidence met the extraordinary-execution gate. [S1-S7]

1 | Daily change audit (10 Oct to 11 Oct)

Node / nature	Index delta	Interpretation and attribution
Q | Connecticut voter data requests	+0.15	First reported Oct. 9, ingested today as a missed prior observation. Named state official reports possible subpoenas; scope and ultimate legal authority unverified. Limited pathway weight; correlated with wider federal voter-data efforts. [S1]
J/O | Temporal decay	-0.05	Continued short-half-life decay of prior rhetoric and isolated Guard election-site proximity. No new operational order observed; expert adjustment, not a factual event.
Net	+0.10	P_t = 101.1 + 0.15 - 0.05 = 101.2. Baseline set at 100.0 on Sep. 25. No independent positive cluster bonus today.

2 | Execution gate audit: CLOSED

Direct statutory order / proclamation	NOT VERIFIED	Published White House action index shows no new election-specific Insurrection Act activation; publication is incomplete evidence of all possible activity. [S7,S18]
Qualifying federal military mission	NOT VERIFIED	D.C. Guard ballot-box proximity is not evidence of a directed election-control mission. Mission, duty status and law-enforcement function must be verified separately. [S4-S6,S10]
Actual civilian command displacement	NOT VERIFIED	State election authorities continue operating; a district court exercised judicial review. No verified replacement of civilian election command by military authorities. [S1-S3]

Classification: E0 = ordinary constitutional operations; E1 = unusual federal preparation/intervention, civilian institutions remain operative; E2 = extraordinary domestic federal military/executive authority actually exercised; E3 = normal civil authority materially displaced/suspended. E1 does not imply E2.

Evidence ledger | causal events, not article counts

Every observation states the underlying origin, first public time, reliability, pathway, persistence, correlated reporting and counterevidence. No new-day rescore for continuing events.

Q-CT-HSI-1009 | Q | +0.15 today — **newly incorporated / older public observation**

The Connecticut secretary of state reported possible federal voter-data subpoenas or requests involving East Hartford, Plainville and Norwalk. Scope and contents were not made public; the local report was published Oct. 9. One multijurisdictional initiative, not three independent events. [S1,S2,S3]
Time: occurred approximately Oct. 6-8, 2026 (unconfirmed); first public 2026-10-09; monitor 2026-10-11 (monitor backfill). Reliability: moderate-high for state official report; unconfirmed exact subpoenas. Strength: low-to-moderate, indirect.
Pathway: Q: federal/state election data interface; civilian HSI/DOJ investigative pathway, not direct military activation. Correlation: FED-VOTER-DATA-2026/CT-HSI-REGISTRARS. Confirming sources: one independent reporting origin, one named state election official; mirrored outlet copies = 0 extra.
Persistence: roughly 21-45-day persistence until subpoena content, legal basis, disposition known. Contradictions / constraints: Subpoena contents and requesting agency not independently documented; state attorneys are reviewing; prior CT judicial ruling constrains the broader bulk-list policy. May involve ordinary case-specific investigations..

N-DOJ-VLR-1009 | N | 0.00 today (carry-forward) — **carry-forward, previously scored -0.35**

District court on Oct. 9 vacated the challenged DOJ voter-list maintenance policy; independent docket records show memorandum and order. It is a separate judicial origin from press reports. [S2,S3]
Time: occurred 2026-10-09; first public 2026-10-09; monitor 2026-10-10 (prior report). Reliability: high: federal court docket and opinion reportage. Strength: strong constraint, moderate EEC pathway relevance.
Pathway: N: federal attempt to direct state voter-list management; civilian not military gate. Correlation: FED-VOTER-DATA-2026/DOJ-LIST-POLICY. Confirming sources: one court decision; two news retellings not independent actions.
Persistence: 30-90 days or until stayed, reversed, or superseded. Contradictions / constraints: Vacatur is targeted; it does not forbid all lawful federal assistance or automatically resolve the status of previously transferred data..

O-DC-BOX-1008 | O | 0.00 today (carry-forward) — **carry-forward, previously scored +0.20**

Oct. 8 photographs showed three Guard troops next to a Foggy Bottom ballot box; military officers characterized them as a stopped patrol, not a tasked election-monitoring team. [S4,S5,S6]
Time: occurred 2026-10-08; first public 2026-10-09; monitor 2026-10-10 (prior report). Reliability: high for proximity, low for inference of intent. Strength: weak-to-moderate physical proximity.
Pathway: O: possible election-infrastructure proximity by DC Guard; no established election mission. Correlation: DC-BOX-2026. Confirming sources: one video/photographic incident, with two corroborating reporters and two Guard accounts.
Persistence: 5-10 day half-life for isolated physical staging. Contradictions / constraints: Box not active at time; JTF-DC says election-site monitoring prohibited; no documented follow-on..

N-DC-BOX-RESPONSE | N | 0.00 today (carry-forward) — **carry-forward, previously scored -0.10**

DC Board of Elections asked for site-distance limitations, and JTF-DC stated soldiers were instructed not to monitor or secure election locations. [S4,S5,S6]
Time: occurred 2026-10-09; first public 2026-10-09; monitor 2026-10-10 (prior report). Reliability: high: attributed official institutional positions. Strength: moderate corrective constraint.
Pathway: N: force-employment restraint at election sites. Correlation: DC-BOX-2026. Confirming sources: two institutional voices but same precipitating event.
Persistence: 14-30 day standing policy signal, until contradicted. Contradictions / constraints: A public instruction is not proof of perfect compliance or a withdrawal of the standing DC Guard mission..

Deduplication: Several towns or several press copies are not multiple independently scored command decisions. CT subpoenas share the wider federal voter-data pathway with the DOJ list-maintenance litigation, but their legal bases and institutions are not presumed identical.

Continuing precursor families | L, A, O, Q, J, N

Two causal stages: observable precursors drive hidden preparation P_t; E_t requires observed execution facts in addition to the prepared state.

Node	Relevant facts retained as context	Current treatment
L - legal	White House public actions index last shows Oct. 7 entries; no newly identified Oct. 10-11 election/Insurrection Act activation order. Broad election executive actions predate today. [S7]	No gate-opening legal fact; lack of publication is only weak negative evidence.
A - organization	DOJ civilian election-monitoring program and prior reported HSI analytics remain relevant as pre-existing organizational capacity. [S8,S9,S22]	Retain E1 context; do not convert attorneys or investigative software into military command.
O - operations	The Aug. 2025 D.C. Guard mission persists; Oct. 8 Foggy Bottom stop near a ballot box has a limiting JTF-DC explanation. [S4-S6,S11]	No new directed election mission; no additional 11 Oct proximity score.
Q - federal/state	CT official described possible records demands in three towns; counsel and state review ongoing. [S1]	+0.15 limited addition after cross-correlation discount, not a new troop deployment.
J - justification	Earlier official emergency-authority rhetoric remains a stated possibility, not a filed order or direct mission.	No new high-confidence predicate; decay isolated statements rapidly.
N - constraints	Oct. 9 DOJ policy vacatur; DC election board objection; JTF-DC directive; military planning assurances regarding polling places. [S2-S6,S21]	Negative evidence remains active; court ruling is limited to its identified policy.

3 | Military / Guard status and scope filters

State-controlled National Guard: emergency relief, disaster response and ordinary governor-directed state active duty or Title 32 activity are not federal E1/E2 by themselves. The Gulf hurricane state activation is therefore excluded from this score. Federalized Guard / active-duty: identify Title 10 status, command orders, statutory mission and actual conduct before E2 assessment. District of Columbia: its unique command relationship does not transform every longstanding street patrol into election control. [S10,S11,S19]

4 | Independent-evidence cluster test

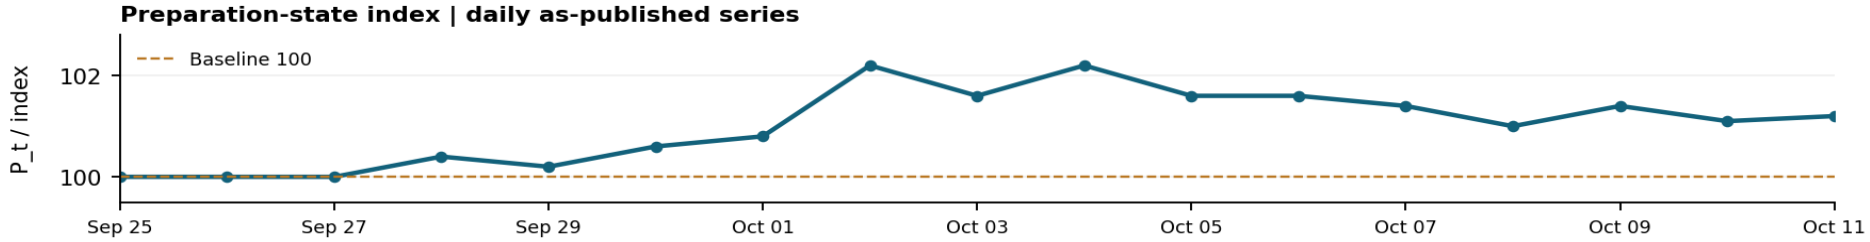

No new seven-day cluster of independent moderate/strong positive L+A+O or O+Q events: the CT record demands are linked to the existing federal voter-data investigation; Oct. 8 Guard proximity is a distinct, weak, bounded event, countered by official mission restrictions. Cluster premium = 0.00. Correlated sources are treated as corroboration, not repeated likelihood multiplication.

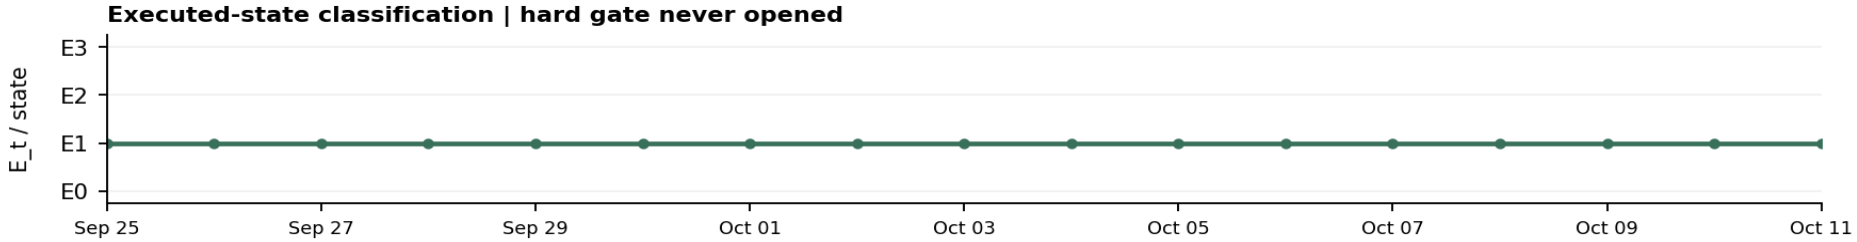

5 | Historical detector sanity checks

Escalation comparators: Little Rock 1957, Detroit 1967, Los Angeles 1992 require the detector to recognize explicit federal authority and executed military missions. Specificity controls: Ferguson 2014, Washington 2020, January 6 2021 warn against classifying state deployment, preparatory staging or emergency response as a military takeover. These six analogies are illustrative only: no empirical sensitivity, specificity or probability calibration can be claimed.

Independent daily trends and model mechanics

Historical series is copied from daily published snapshots, not retrofitted to match the present conclusion.

Daily trajectory: Sep. 25-Oct. 11 2026, baseline 100.0; October high 102.2 (Oct. 2, 4); prior P_t 101.1; current P_t 101.2. Executed E_t has remained E1 on every recorded day; the E1-to-E2 gate has remained closed.

6 | Bayesian architecture and normalized index rule

Graph: O_t = {L,A,O,Q,J,N} -> P_t -> E_t; temporal arcs P_(t-1)->P_t and E_(t-1)->E_t; shared-source parents/correlation IDs reduce dependence errors. A calibrated filter would infer p(P_t | O_1:t, P_(t-1)) and p(E_t | E_(t-1), P_t, X_t), where X_t are qualifying execution indicators. The current prototype does not estimate those conditional distributions.

Expert normalization (not a posterior): Delta P_t = sum_i sign_i x reliability_i x pathway_i x strength_i x correlation_discount_i x 2^(-age_i/half_life_i) + cluster_adjustment. The published numbers are rounded expert index contributions, not fitted likelihood ratios. Illustrative half-lives: rhetoric 2-5 days, physical staging 5-10 days, administrative preparation 21-45 days, legal judgments 30-90 days unless superseded. [Method assumption]

New Q update: +0.15; existing J/O decay: -0.05; no new cluster premium. Relative to Oct. 10, the daily index shift is +0.10. Since the baseline represents the start of this monitoring series rather than zero risk, an index >100 must not be interpreted as >100 percent. Probability of E2/E3 withheld.

Execution gate: E2 requires at least one verified activation/proclamation, forces actually executing extraordinary domestic law-enforcement/control under appropriate federal authority, or verified transfer/displacement of civilian command. E3 requires actual material suspension/displacement of normal civilian government. Confidence assessments are pathway-specific, not a vote-count across headlines.

External weak signals, horizon and audit sources

Citations are live clickable links. Markets are tracked as context only and have zero weight in P_t or E_t.

7 | Prediction markets - quarantined weak signals

Contract (not EEC)	Visible yes quote	Data quality and treatment
Insurrection Act by Dec. 31, 2026	approx. 16%	Polymarket web snapshot Oct. 11; not an executed authorization, not independently calibrated; stale caching / order-book effects possible. [S14]
Executive nationalization of elections by Dec. 31	approx. 10%	Separate contract settlement definition from E2 military threshold; not an independent official signal. [S15]
Election-interference national emergency	not refreshed	Market site inaccessible in this review; no invented same-time quote and no index weight.

8 | Horizon, constraints and scope exclusions

Twentieth Amendment default: 120th Congress meets noon Sunday, 3 January 2027 unless the outgoing Congress appoints another day by law. No enacted alternate convening date was identified in this review; continue through 5 January 2027 and update end to two days after any enacted replacement date. [S12,S13]

Applicable checks: 10 U.S.C. 251-254 (Insurrection Act; sec. 254 proclamation), 18 U.S.C. 1385 (Posse Comitatus), and 18 U.S.C. 592 (troops at election sites). Lawful routine federal criminal investigation, federal civil-rights polling observation, press disputes, and state disaster Guard activations do not by themselves satisfy the E2 execution gate. [S8,S10,S16-S20]
